

## Method to install *symbolic* package in Windows systems

November 19, 2019

1. Uninstall existing packages using `pkg uninstall symbolic`.
2. Go to the website, <https://github.com/cbm755/octsympy/releases> .
3. Download the file, `symbolic-win-py-bundle-2.8.0.tar.gz`.
4. Change the directory to the folder containing this file.
5. Type the command in the *command window* of Octave:  
`pkg install symbolic-win-py-bundle-2.8.0.tar.gz`.
6. Restart Octave.
7. To use *symbolic* type the command: `pkg load symbolic`.
8. Use the command `syms x` to declare the variable `x` as a symbolic one.
9. If you have troubles in installing, feel free to mail us.
